

Coverage Extension

Connect multiple properties with individual Lightwire internet connections.

A Lightwire Rural Broadband *Coverage Extension* provides an internet connection to neighbouring facilities or properties that don't have sufficient line of sight to a rural broadband tower on their own.

In this solution, a property with line of sight to a Lightwire Rural Broadband tower extends (or relays) the connection to the neighbouring facilities or properties by a wireless radio link.

This enables you to connect the home, the workshop, the workers' house and the granny flat, while everyone has their own data plan and WiFi router.

You can organise all the connections onto one account, or keep them separate. Our local Customer Care team can help get everyone set up with their Lightwire rural broadband plans.

For a Lightwire Coverage Extension, sufficient line of sight between properties is required, so a Lightwire installer will confirm for you how we can get everyone connected.

Installation	Monthly Charges	Hardware Included
\$199 per additional location	A Lightwire Rural Broadband plan per connection + \$10 per additional location 12 month min. term	- A CPE (Ubiquiti PowerBeam®) - A WiFi-enabled router per connection - Cabling from the CPE - A pair of NanoStation® radios per additional location
